Water Quality Control

Jamie,

Please find attached the July 2016 Discharge Monitoring Report for the 100 Saint Paul building for your review and signature. There were no exceedances during the month and flow has continued to be fairly steady at 33.69 gallons per minute. Based on first weeks of August, the flow may be decreasing as precipitation decreases. Let me know if you need additional information or an updated summary table.

Please submit the original signed DMR pages to the address below and send me a scan copy for my files.

Colorado Department of Public Health and Environment
Water Quality Control Division
WQCD-P-B2
4300 Cherry Creek Drive South
Denver, Colorado 80246-1530

Thanks,

Jonathan P. Anstey, P.G.
Senior Project Geologist I Environmental
